

# MerchantsV1 App Summary

## What it is

Multi-tenant merchants platform with an admin dashboard and customer-facing storefronts (slug or custom domain) built as a React SPA.

## Who it's for

Primary: merchants/store owners managing products, orders, and their storefront.

## What it does

- Admin dashboard for products, collections, customers, and orders.
- Storefront pages: home, catalog, product detail, cart, checkout, order confirmation.
- Custom-domain storefront routing alongside admin domain.
- Storefront editor, templates, and pages/navigation management.
- Payment options via Paystack and Whop on checkout; billing via Polar.
- Analytics/monitoring hooks included (PostHog, Sentry).

## How it works

- Browser runs Vite/React app with React Router (admin + /s/:slug storefront).
- Supabase JS client provides auth and data access for merchants/products/orders.
- API routes in /api handle payment flows (Polar checkout/webhook/customer portal, Yoco checkout).
- Custom-domain detection selects storefront vs admin UI; checkout talks to payment providers.

## How to run

- `cp .env.example .env` (set VITE\_SUPABASE\_ANON\_KEY; update URL if needed)
- `npm install`
- `npm run dev` (Vite default: `http://localhost:5173`)
